

Protect Your Browser

Install Privacy Extensions:

-  [Privacy Badger](#) - Blocks invisible trackers
-  [AdGuard](#) - Advanced ad & tracker blocking
-  [Disconnect](#) - Stops third-party tracking
-  [NoScript](#) - Control what scripts run

Virtual Private Networks (VPNs)

What a VPN Does:

- Masks your IP address and location
- Encrypts your internet traffic
- Protects you on public Wi-Fi

When to Use a VPN:

- ☕ On public Wi-Fi (coffee shops, airports, hotels)
- ✈️ When traveling
- 🏠 To hide your browsing from your ISP

⚠ Note: Choose reputable VPN providers—some free VPNs sell your data!
