What Is Browser Fingerprinting?

When you visit a website, your browser shares information:

- Device type and operating system

- Screen resolution and color depth

- Installed fonts and plugins

- Time zone and language settings

- Browser version and settings

Combined together, these create a unique "fingerprint" that can identify you—even without cookies.

Quick Wins: Things Everyone Should Do 👍

- 🔐 Use strong, unique passwords (20-25 characters)

- 🗝️ Use a password manager (Apple Passwords, 1Password, Bitwarden)

- Use a remailer service for online accounts

- 📲 Enable Multi-Factor Authentication (MFA) everywhere

- Setup a Passkey when prompted

- 🔄 Keep all software and devices updated
