What Can Organizations Do?

Honest Security Principles:

- Build trust through transparency and informed consent

- Expect employees to use work devices personally

- Design detection capabilities with privacy in mind

- Educate users to make informed security decisions

- Align security programs with organizational values

Org Responsibilities to Users

Security Basics

- Require MFA

- Enforce encryption

- Regular security training

- Incident response plans

Privacy Practices

- Minimize data collection

- Transparent policies

- User privacy controls

- Secure data deletion

Ask yourself: Does your employer do these things? What about the websites you use?
